CURRENT CONTROVERSIES IN ORTHOPAEDIC ENHANCED RECOVERY

31st January 2014

Registration 9am – 3:30pm

Beardmore Hotel and Conference Centre

Topic

The day is designed to update all those involved in orthopaedic enhanced recovery about problem areas which we all recognise. It is anticipated that the talks and debate will further our understanding of the problems and help to standardise the solutions.

The day will include discussion of the following topics by a selection of speakers involved in enhanced recovery from throughout the UK:

- An overview of the 2013 ERAS national audit in Scotland
- Fasting times and clear fluids – current best practice
- The controversies surrounding Pre-medication
- Best practice in perioperative analgesia and the use of Gabapentin
- The causes of hypotensive episodes and their impact on recovery
- the role of post-discharge physiotherapy

Audience

The day is aimed at all professional groups involved in enhanced recovery who wish to update their understanding of the subject. Although this is primarily aimed at those involved within orthopaedics many of the topics will be common to other specialties and thus all interested professionals are welcome to attend.

This is a non profit making event. The fee charged is to cover catering, facilities & administration. The cost to attend this event is £30.00

To reserve a place please complete the registration form and send it to Kirsty Quinn, Beardmore Centre for Health Science Administrator by email at health.science@gjnh.scot.nhs.uk. Alternatively you can contact Kirsty on 0141 951 5910 for further information.

Thank you to our sponsor for the day:
